

ABSTRACT OF THE DISCLOSURE

A vehicle and/or equipment storm shield is provided as having a spool of membrane material, which may be relatively quickly un-spooled to provide a sheet of membrane material operative to substantially enclose the vehicle and/or equipment for protecting the vehicle and/or equipment from wind, rain and/or flying debris associated with storming conditions. In a similar manner, the vehicle and/or equipment storm shield may also be adapted to protect computers, generators, communications equipment and the like, from damage due to storming weather conditions.
